Project Falcon: Multi-Agent M&A Due Diligence in Claude Code

No application code. Built with subagents, slash commands, a working-memory folder and permission rules.

THE PROBLEM

Diligence teams research a target across SEC filings, news, litigation and financial records. Open-ended work that can take 5 to 10 associates several weeks.

Agent Core

Lead agent, defined in CLAUDE.md

PLAN → ACT → OBSERVE

loop again if needed (max 3 iterations)

Compares sources, finds conflicts and disclosure gaps

reads / writes

Working Memory

memory/ folder (findings, datasets)

findings.md: register of every finding with ID, severity, confidence, source and status

datasets/: key metrics and calculations

plan.md, open-questions.md, run-log.md

(the audit trail of every step and checkpoint)

ACT

OBSERVE

Specialist subagents (run in parallel, read-only)

SEC Filing Search

`sec-filings-analyst`

10-K, 10-Q, 8-K, proxy
controls, covenants, governance

News & Media API

`news-media-analyst`

articles, short-seller report
fact vs allegation vs rumor

Litigation Database

`litigation-analyst`

dockets, rulings, exposure
injunction and closing risk

Financial Analysis

`financial-analyst`

statements, add-backs, KPIs
leverage and valuation checks

VERIFY

Citation Verifier

`citation-verifier`

independent quality control:
re-checks every key finding

Comprehensive Due Diligence Report

risk matrix, answers to IC questions,
deal protections (md, html, pdf)

Human-in-the-loop checkpoints (the system stops and waits for a person)

1. **Approve the plan** — after PLAN, before any analysis
2. **Review red flags** — dig deeper, or proceed to verify
3. **Sign off** — after verification, before report

CONTROLS: autonomous agents are powerful but hard to control, so every step is bounded

- Mandatory human checkpoints
- Max 3 Plan, Act, Observe loops
- Specialists are read-only
- Source data cannot be edited
- Web access blocked (settings.json)
- Every finding cites file and section
- Rumors and allegations labeled
- Graded against an answer key

All companies, people and data are fictional. Portfolio case study built with Claude Code.
